

CALENDAR EXPLANATION

Biggest misconception is "Indian Hindu festivals observance date in the Indian calendar / panchang is applicable for all location in world". We use our favorite Panchangam brought from India to find an observance date for an Indian festival. In reality observance dates from Indian Panchangam is valid only in India and is not transferrable to other locations. If the earth is flat we can use Indian calendar everywhere in the world. If the earth is flat then Sun & Moon will rise all places at the same time, and no need of time zones and hence Indian Panchangam can be used everywhere in the world but the trouble is the earth is round and the Sun does not rise at the same time, or set at the same time all over the world. Additionally, we have time zones and time differences. Due to the time zones/differences there is another misconception that as USA/Canada and Europe is behind in time then Festival will come a day later in USA/Canada and Europe. This is absurd. If Seattle/Vancouver/California is 13 hours 30 minutes behind Indian Standard Time and say an event is occurring in India (For example One day International Cricket match at 8 AM in India then will it be the previous day in USA/Canada or the next day? To arrive the time you'll subtract 13 hours 30 minutes from 8 AM. Which gives 6 hours 30 PM the previous day in USA/Canada. Same rule is applied here. Tithis, Nakshatras, Yoga and Karana ends at the same instance all over the world (Like any celestial event). After having tithi and nakshatra endtimes, the rules used to determine festivals in India are applied for overseas panchangam. This requires extensive knowledge of Panchangam Agama (Shastras) with mathematical knowledge to calculate Tithi, Nakshatra, Yoga and Karana, Day (Vaar) and Local factors like Sunrise, Sunset, Moonrise, and Moonset. Hence, sometimes festivals may appear on the same day as India or a day before in the countries west of India. Where as in the countries east of India the festival may appear on the same date as India or a day later.

There is a basic difference between English date and Hindu Date: The English date and the day (Sunday, Monday, etc.) changes at the midnight. Hindu day (Vaar) also doesn't change at the midnight. But changes at the sunrise, a Hindu day is from one sunrise to another. The Hindu date or tithi (the festival falls in to) doesn't change at the midnight. The Hindu date (tithi -- depends on the positions of sun and the moon at any given time) changes anytime as celestial bodies keep moving. The Tithi duration is the time it takes for the longitudinal angle between the moon and the sun to increase by 12°. Hence it varies from approximately 19 to approximately 26 hours. It can change anytime between one Sunrise to another Sunrise. If a tithi ends today at 23:02 it doesn't mean that next tithi will end tomorrow at the same time. It can end at 18:00, 18:09 or 20:27.

Panchangam contains two types of calculations: Local coordinates like longitude and latitude. (The earth is kinda round and horizon will vary from place to place on earth. Hence these calculation may vary from the place to place.): Sunrise, Sunset, Moonrise, Moonset. The Geocentric astronomical phenomenon (The planetary positions will be different for every second) like: (The tithi, nakshatra, yoga and karana are based on this set of calculations): Positions of Sun, Moon etc. The astronomical phenomenon happens instantly at the same moment on the earth and hence thithis, nakshatra will end at the same time / instance all over the world and we have to convert them to the local standard time. One has to convert timings into their respective timezone. The planets don't wait for sunrise or sunset at the particular place. They just keep moving, like earth is moving around the Sun. Hence the distance we call it tithi (quotient or the result of the division = (sun - moon)/12.0) can change at any time. So new thithi can change at 6:00 AM, 6:32 AM, or 11:57 PM or any time during the day. There is no fix tithi ending time like English date and hence they are not associated with the English date.

Planets are calculated from the center of the earth -- Geocentric. Hence, their position at the given time (at the same instance) will be same all over the world (After subtracting the time difference). If we want to observe any celestial event, we need to convert it to our local time, same goes for thithi, nakshatra, yoga and karna positions are same at any given time in the world. So Indian panchang makers convert this to Indian time. The very same say we need to convert it to our time zone for America. After adding the time difference they'll assign to the resulting English date. Hence, when the calendar is made of India the date they mention is when that tithi will end as per the English date in India. If you take the same date and time use it anywhere in the world as it is then we have a wrong result because of the time difference. The time difference between the India and the London is 5 hours 30 minutes, Time difference between Seattle, WA and India is 13 hours 30 minutes. The planets don't remain static during that time.

For example: October 17th 2008 the Ashwayuja (Ashwin) Krishna Paksha / Poornimant Kartik Krishna paksha tithi Tritiya ends at 16:39:21 Indian Standard Time, and chaturthi starts. That means at 16:00 hours there is trititiya still prevailing in India. Now on October 17th 2008 in Seattle, WA at the 16:00 hours we won't have trititiya at that time. We already have chaturthi started why? a) Planets keep on moving. 13 hours have passed and the position of sun and moon have changed. So what time Tritiya will end in Seattle? The time difference is 13 hours 30 minutes (with one our day light saving time it gives the difference of 12 hours 30 minutes from IST). So, let's subtract 12 hours 30 minutes from the 16:39:21. That gives us 04:09:21 AM on October 17th. So on October 17th after that time we'll have chaturthi tithi and before we have trititiya. The same way if tithi ends at 8:39 AM on Sept 12 in India it will end at 20:09 PM on Sept 11th in Seattle. The same way Western Australia is 8 hours ahead of GMT and hence the chaturthi will end there at 12:09 PM on Sept 12th. The planets don't wait for appropriate tithi to arrive on some English date at any location in the world. If it really did we won't have any days and nights (If it happens then celestial bodies will remain static in sky). The arth keeps moving. It doesn't wait for tithi or festivals to arrive in your timezone. The sun doesn't rise instantly at the same time all over the world Hence we need to convert the tithi, nakshatra, yoga, and karana time to local standard time. After we know what time a given tithi ends it's a time to decide festival dates for each region.

How festivals are determined? Each festival has a different rule, for example: Ganesh Chaturthi. Sankathara chaturthi, Janmashtami, Mahashivaratri, Karwa Chauth, etc. Ganesh chaturthi has to be observed when the chaturthi tithi is observed during the 3/5th part of the difference of local sunset and the sunrise. The karwa chauth and the sankathara chaturthi the chaturthi tithi must be prevailing during the moonrise time. If one tithi is observed at the moonrise time in India it may or may not be observed during the moonrise time on the same day in the different part of the world. It may be very well observed on the previous day if you are in America or the next day if you are in Japan, Fiji, Australia, or on the same day as India, due to different sunrise times, different sunset, moonrise timings and tithi timings requires a separate panchangam for different places. Panchang makers in India cannot prepare printed panchang for each and every place, increasing printing costs etc. Hence, they just make panchang for the one of the city in India. Given that example even the IST remains same for Kashmir to Kanyakumari and from Kutch to West Bengal the festival dates can be same for entire India. Sankathara Chaturthi/Karwa Chauth moon rise time is important. Moonrise in New Delhi on a given date is at 19:36 and in West Bengal, Kolkatta is at 19:25 PM. Now trititiya ends at 19:32 PM IST. So Kolkatta will celebrate karwa chauth/sankathara chaturthi on the next day where as people in New Delhi will celebrate on the same day.

23:xx	24:xx	25:xx	26:xx	27:xx	28:xx	29:xx	30:xx	31:xx
11:xx PM same date	0:xx AM next date	1:xx AM next date	2:xx AM next date	3:xx AM next date	4:xx AM next date	5:xx AM next date	6:xx AM next date	7:xx AM next date

Timings in this calendars are end timings of the Tithi and Nakshatra and for Sun/Moon entering time when it enters a new rashi. If the hour number is greater than 12 it means PM. When the hour number is greater than 23 then it ends on the next English date before sunrise, that means subtract 24 hours from hour to get exact time and take next English date. For example tithi Amavasya ends at 26:36 on 19th March 2015 it means it really ends past midnight of 19th March 2015 but before next day sunrise of 20th March. Here it ends at 2:36 AM on 20th March. English Dates don't exactly map to Hindu Day and Date. Hindu day is from one sunrise to another and Hindu Date don't start at midnight.

Uttarayana/Dakshinayana: The season occur based on earth's position around the Sun. This is due to Earth's tilt of 23.45 degrees. The Earth orbits around Sun with this tilt. When the tilt is facing the Sun we get summer and when the tilt is away from the Sun we get winter. Because of this tilt it seems like the Sun travels north and south of the equator. The Uttarayana is the Sun appearing to move north. The Dakshinayana is the Sun appearing to move towards South. This causes rise to seasons and dependent on equinoxes and solstices. There is a common misconception that Makara Samkranti is the Uttarayana. This is because at one point in time Sayana and Nirayana Zodiac were same. Every year equinoxes slides by 50 seconds due to precision of equinoxes, giving birth to Ayanamsha and causing Makara Samkranti to slide further. If you think Makara Samkranti is Uttarayana then as it is sliding it will come in June after 9000 years. Makara Samkranti still holds importance in our Rituals as a Samkranti. All Drika Panchanga makers like mypanchang, Rastriya Panchang, Janmabhumi Panchang, will use the position of the tropical Sun to determine Uttarayana and Dakshinayana. Hence January 14th isn't Uttarayana. Actual Uttarayana occurs on December 21st/22nd of every year. The same for Ritu. Ritus are always observed based on Tropical position of Sun but some observe based on Lunar month or some on Nirayana Sun. We at mypanchang.com are drika ganitha.

About myPanchang.com: myPanchang.com is the leading panchang maker providing the most accurate panchagam in English and various Indian languages and panchangam for over more than 394 cities all over the world based on highly accurate driga ganitha or thiruganitha. Most temples in the world rely on myPanchang.com for accurate Panchang data and festival observance times. For more details please visit <http://www.mypanchang.com>.
